Interaction with images: annotations

width	height	left	top		type
114	130	168	239		track
80	87	329	292		track
48	37	422	321		car

Some existing tools

ilastik

RootPainter

RootPainter: corrective annotation concept. (a) Roots in soil. (b) AI root predictions. (c) Human corrections. (d) AI neurons from corrections.

Building modular annotation tools in web apps

- ▶ Modular tools to serve different applications
- ▶ Python tools
- ▶ Web apps vs. desktop applications or client-side execution

Plotly graphing libraries

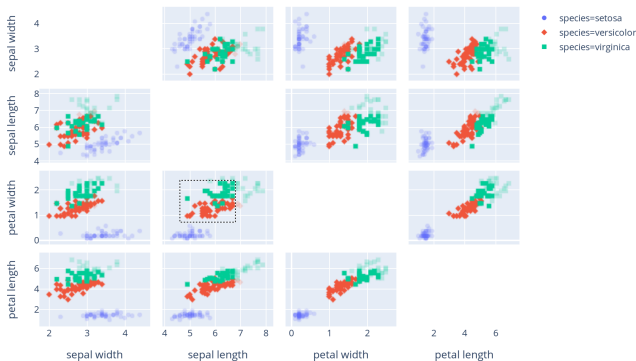

Javascript interactive library with Python (R, Julia) API

Large variety of traces and layout options

High-level API `plotly.express` and low-level API

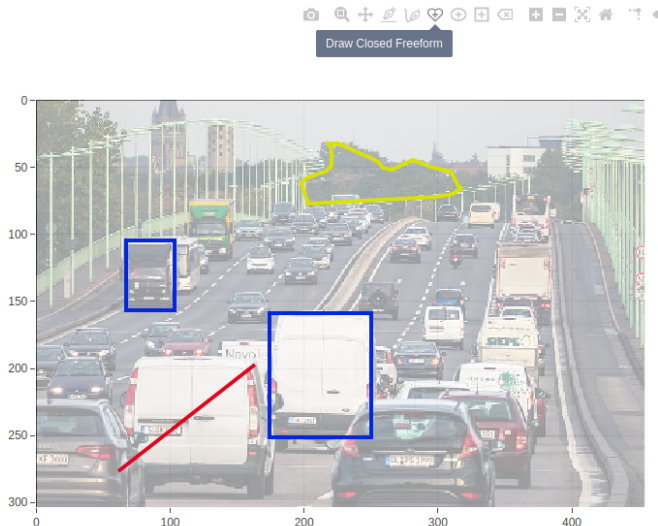

`plotly.graph_objects`

Scatter matrix of iris data set

<https://plotly.com/python/>

Drawing and annotation tools in plotly graphing libraries

Introduced in plotly 4.7: 5 new dragmodes for drawing shapes
layoutData events for Dash apps → geometry of annotations

Dash

Dash lets you build beautiful web-based analytic interfaces on top of Python or R code.

- Interactive, web-based visualization
- Core libraries: dash, dash-core-components, dash-html-components
- Specialized libraries: dash-daq, dash-bio
- MIT licensed and open-source

<https://dash.plotly.com/>

`pip install dash`

Python only, no Javascript required

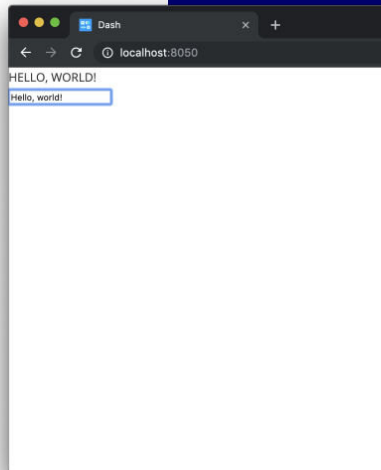

Creating a Dash App

```
import dash
import dash_html_components as html
import dash_core_components as dcc

app = dash.Dash()
app.layout = html.Div(children=[
    html.Div(id='output-div'),
    dcc.Input(id='text-input')
])

@app.callback(
    dash.dependencies.Output(
        'output-div', 'children'
    ),
    [dash.dependencies.Input(
        'text-input', 'value'
    )]
)
def capitalize_user_input(text):
    return text.upper()

app.run_server()
```

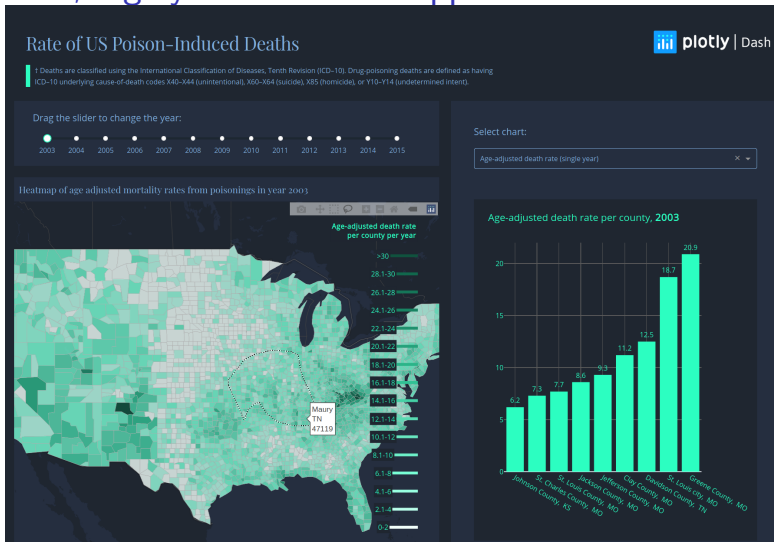

Beautiful, highly customizable apps
